LIOVA GROUP s.r.o. puts its trust in RINGTREAD BLACKLINE RTE PLUS

High mileage, reliability and proven extraordinarily long life.

Liova Group s.r.o. is a Czech transport company serving both national and international destinations. Over the years, in order to meet growing customer demand, the company has extended its offering to include logistics and storage services. Goods are stored at the company's two terminals in Ostrava and Pohorelice, near the city of Brno and the main motorways. From here, the goods are delivered to the final customer. The company's fleet includes around 60 vehicles of different types, allowing it to customise any order and ensure the highest customer satisfaction: from small delivery vans to 18 tonne trucks, vehicles fitted with hydraulic lift platforms and refrigerated semi-trailers.

RTE PLUS

Liova Group s.r.o. also provides pure logistics services in the beverages sector. In this business, its vehicles operate over medium-long distances, with severe regional conditions accounting for around 30% of total mileage. The high weights carried represent an additional critical factor for the tyres fitted on the vehicles. The objective for Liova Group s.r.o. is therefore to maximise tyre life, using tread patterns that not only ensure high mileage, but are also capable of providing very high performance on winding roads and demanding corners, and cope with all the typical threats of urban infrastructure.

The **Ringtread Blackline RTE Plus** retreads, supplied to Liova Group by **Carling SRO**, have proven to be the best response to their needs. Carling SRO is one of the biggest retreading and services companies in the Czech Republic. With a branch in Slovakia, eight service points and fully-equipped tyre fitting vans, Carling SRO can provide fleets all the services they need.

The **Ringtread Blackline RTE Plus** treads, in size 385/65R22.5, ensure exceptional mileage: the average, on the three trailer axles, is 190,000 kilometres per tyre. Everyone at the Liova Group agrees in stating that this result makes the **RTE Plus** an excellent alternative to both new products and premium retreads. They further underline the advantages the treads bring in terms of reliability and optimisation of casing life.
